## DMR & Analytical Monitoring Report

Is your industrial facility permitted under a Multi-Sector Generic Permit for Stormwater Discharge (MSGP)? Are you in Year 2 or Year 4 of said permit? If the answer to these two questions is a yes, then you may be required to report and submit what is known as an Analytical Monitoring Report.

The Analytical Monitoring Report summarizes the respective Year 2 and Year 4 quarterly Discharge Monitoring Reports (DMRs). These reports are submitted electronically through the EzDMR system for state records to ensure compliance.

If you require assistance with submitting your Analytical Monitoring Report or have questions on how to register and access the EzDMR system, KCI is ready to assist you.

Some sectors of the MSGP require quarterly analytical monitoring in Years 2 and 4 of the permit cycle. This monitoring is sometimes referred to as "Analytical Monitoring" or "Benchmark Monitoring." Analytical Monitoring results are required to be submitted to the department

A few sectors of the MSGP impose numeric effluent limitations. This type of monitoring is called "Compliance Monitoring" and is required to demonstrate compliance with the effluent limitations. Analytical results from compliance monitoring are required to be submitted to the department;
